

Athena DexFi

Decentralized Management Service

Market Size

Total DeFi Users Over Time

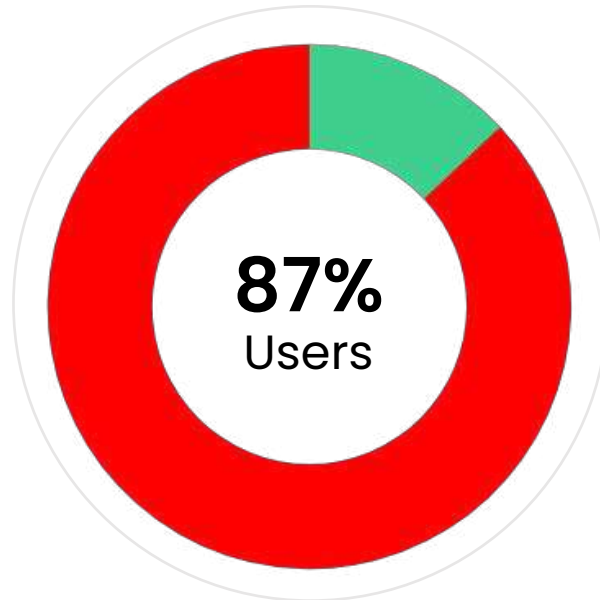

From January 2020 to July 2022, the number of users on DeFi increased from about 91,000 to almost five million. Updated data from 2023 reports seven million users.

Market Size

Problem to address

These new investors jump into the crypto market without proper knowledge and almost 90% of them lose money in their first days.

- Users in profit after 12 months
- Users in loss after 12 months

A study conducted by eToro found that almost 80% of them lose money over a 12-month period. **The average loss is 36%.**

Why That Happens

Further issues for an investor in DeFi

A study conducted on over 100 crypto investors from our community evidence these as pain points:

Time Negligence

DeFi users need to constantly monitor their investment all the time because there are no stop loss and or stop market order in DeFi.

Lack of Experience

Due to their limited experience with advanced tools like short orders or loans, beginner users often struggle to effectively utilize them.

Security Concerns

Users who venture into the DeFi realm without adequate knowledge are exposed to a myriad of diverse and substantial hacking risks.

Market Emotivity

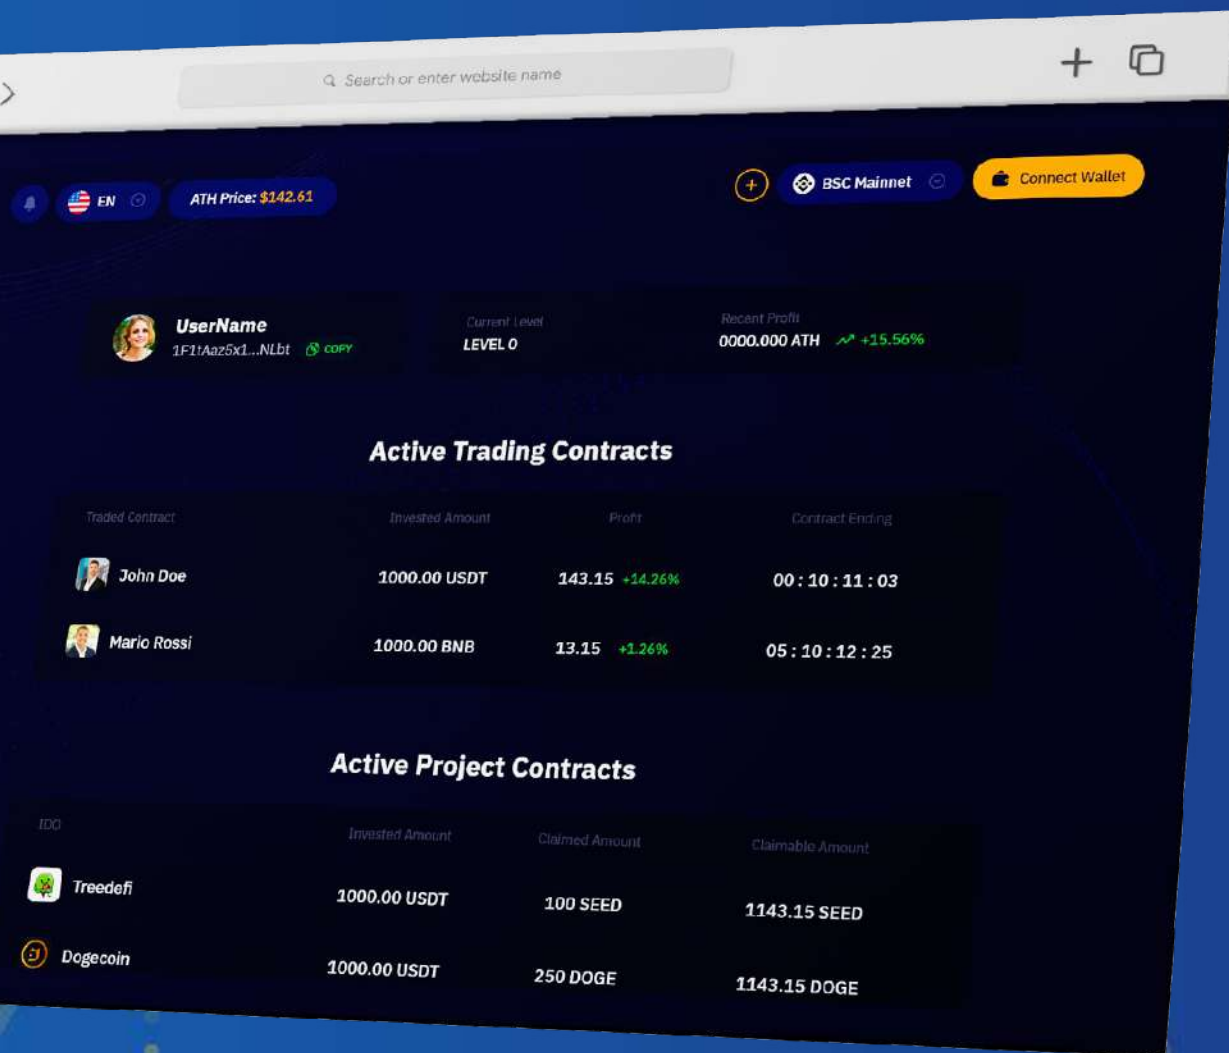

Market emotivity can engulf inexperienced traders, pushing them to make impulsive decisions based on fear or excitement, leading to potential financial losses.

Problem

Athena's Mission

It would be wonderful to be able to entrust the management of our money to someone without having to worry about the market trends, also having the immutable proof of their past performance.

Solution

Some of our services:

Unlike other platforms, our main focus is to provide automatic investment opportunities that do not require specific skills. We empower our users to exclusively use automated systems, enabling even less experienced investors to participate in DeFi.

Managed Presales

Invest in top projects and don't worry about selling; all management is automatic. You can invest in projects on any chain simply by using your preferred chain. Deposit USDT and withdraw USDT.

Managed Trading

If you are an experienced investor, the blockchain will provide irrefutable proof. Create your smart contract and manage your clients' money securely, clearly, and transparently.

AI Analysis

Many believe that AI can handle tasks autonomously, but we see it as a support to enhance human capabilities. We are developing our AI to produce fundamental analysis, to assist our clients and analysts in selecting the best ones.

Free Trading Bots:

We discover top trading bots on platforms like Cornix, evaluate their performance, and freely provide them for use by our Level 1 clients.

Truflation

Truflation is a leading DRP (definite reference point) for economic truth that is powering the tokenization of Real World Assets with it's independent, transparent, and real-time financial data. Tracking over 13 million items, Truflation's censorship-resistant and accessible data indexes provide the necessary data infrastructure to bring about systemic advancements in the DeFi economy, empowering dApps like DEXs to open limitless markets. From speculating on prices of orange juice and uranium to enabling BTC-denominated oil, gas, and corn prices, Truflation provides the key to unlocking a diverse array of financial markets and instruments in the Web3 world.

How does the magic of managed security happen?

Everything is regulated by our smart contracts, and those managing them cannot send the money out.

Thanks to Gate.io's feature of sending tokens from a subaccount only to a whitelisted account, the manager cannot steal the money or claim to have earned less. The only way for him to collect his commissions from a sale made is to send the USDT to the contract, thus ensuring investment funds and managers remain transparent about their actual earnings.

Solution

Platform Features

Unveiling the secret

Performance Proof

Many platforms display hypothetical profits, ideal as if they sold at the highest price. We only show what we actually sold. Our results are real.

Ath Token

ATH is the native token of the project. By locking it on the platform, you can reach a higher level. Higher levels allow you to: reduce fees when investing in presales or having your money managed by others, earn more when inviting a friend, or if you're a trader managing a trading account.

Full Security

Traders and managers do not have direct access to the funds, but can only operate through the smart contract which has enabled only specific coin pairs or whitelisted addresses.

Advanced Dex Tools

Traders can operate using advanced decentralized trading tools such as limit orders, stoploss orders and short orders.

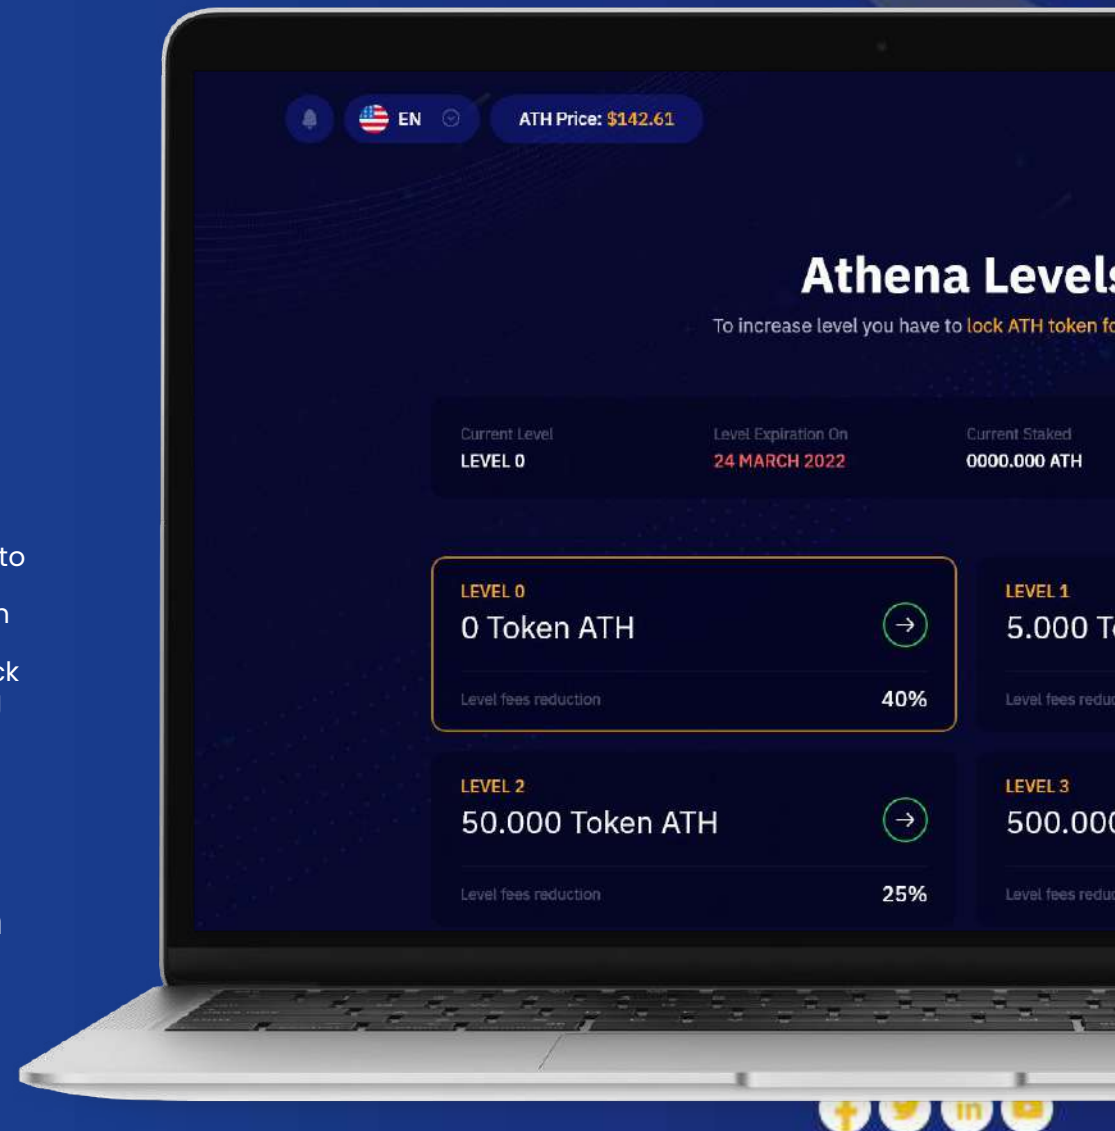

Scalable Fees

Unlike other platforms, we allow users to participate in investments without owning platform tokens, allowing them to try with higher fees on profits. If investments perform well, they can lock their ATH to reduce fees, but unlocking will incur payment of maximum fees even on past investments.

Innovative Referral System

The referral is not counted on the capital invested by the friend but on the profit that the latter has made, so if he has invested in the right project, the returns can be enormous.

Competitor Analysis

Why are we decentralized?

We have decided to build our platform in a decentralized environment because it is safer and more transparent. Surely, these are the strengths of any decentralized application:

Decentralized

We allow everyone to manage money, everything is regulated by smart contracts, and if you have proven to be good, you are welcome.

Privacy

Almost all of the CEXs need KYC (Know your customer) at the moment, the DeFi is more anonymous and safe.

Custody

CEX hold their customers' tokens, which exposes them to the risk of failure or account suspension. Not your keys, not your coins!

Financials

Capitalization Table

Currently, we have not faced major competitors in the DeFi sector thanks to the unique features we have implemented. A quick comparison with the best in the industry:

Feature	BYBIT	BINANCE	ChainGPT	REDKITE	ATHENA DeFi
Performance Proof	✓	✓	✗	✗	✓
Self Custody	✗	✗	✓	✓	✓
Platform tokens are not required	✓	✓	✗	✗	✓

Roadmap

In the space of travel & technology

Discover our complete roadmap in our telegram group.

Completed

Alpha Release of Platform

Including operational trading contracts with Limit Orders, Stop Loss, Market orders. Backend and Frontend implementation.

Referral Program

Smart Contract of the Operational Referral Program that allows the platform the invitations made.

Community Launch

Our community launch on Telegram and Twitter was a resounding success, with enthusiastic engagement and exponential growth in followers.

In Progress

Managed Presales and Trading

Trader Factory Audit, Frontend and Backend edits to allow users to autonomously perform the opening of a trading contract.

Beta Release

We are thrilled to announce the beta release of our platform's task feature, allowing users to efficiently organize and manage their workflow with ease.

Planned

Bug Bounty

Exciting news! In the near future, we will be introducing a bug bounty program task, offering rewards for discovering and reporting vulnerabilities to enhance platform security.

Smart Contracts Audit

Tier 1 audits for all the smartcontracts in athena's platform.

Institutional Partnerships Reveal

Revealing of institutional partnership.

Public Release

Public release and marketing of the Athena DexFi Platform.
